Kickstarter

KICKSTARTER

Kickstarter

KICKSTARTER

- A website where you can pitch a project and receive funding for it

Kickstarter

KICKSTARTER

- A website where you can pitch a project and receive funding for it
- The project can be literally anything

Least common categories

Kickstarter

KICKSTARTER

- A website where you can pitch a project and receive funding for it
- The project can be literally anything
- The funding comes from “backers”, i.e. everyday people visiting the website who likes your pitch
 - Usually people get some rewards for pitching in with more money

Kickstarter

KICKSTARTER

- A website where you can pitch a project and receive funding for it
- The project can be literally anything
- The funding comes from “backers”, i.e. everyday people visiting the website who likes your pitch
 - Usually people get some rewards for pitching in with more money
- There's no guarantee that the project will succeed

Amount of KS projects launched per year

The Data

The Data

- Information about KS projects from 2009 to 2018

The Data

- Information about KS projects from 2009 to 2018
 - Project name, project category, # of backers, amt pledged, status etc.

The Data

- Information about KS projects from 2009 to 2018
 - Project name, project category, # of backers, amt pledged, status etc.
- 378661 rows x 15 columns

The Process

The Process

- Data Cleaning

The Process

- Data Cleaning
- Do a PCA and plot it in 2D if it captures enough variance

PCA plot with the first 2 components (ca 90 % variance)

The Process

- Data Cleaning
- Do a PCA and plot it in 2D if it captures enough variance

The Process

- Data Cleaning
- Do a PCA and plot it in 2D if it captures enough variance
- Do elbow plots with KMean for different ranges of k
 - $k(1, 5) \rightarrow k(1, 12)$

The Process

- Data Cleaning
- Do a PCA and plot it in 2D if it captures enough variance
- Do elbow plots with KMean for different ranges of k
 - $k(1, 5) \rightarrow k(1, 12)$
- Create n clusters with KMean where n are all the suggestions from the elbow plots

The Process

- Data Cleaning
- Do a PCA and plot it in 2D if it captures enough variance
- Do elbow plots with KMean for different ranges of k
 - $k(1, 5) \rightarrow k(1, 12)$
- Create n clusters with KMean where n are all the suggestions from the elbow plots
- Use the PCA as a measure of how many clusters are relevant

The Process

- Data Cleaning
- Do a PCA and plot it in 2D if it captures enough variance
- Do elbow plots with KMean for different ranges of k
 - $k(1, 5) \rightarrow k(1, 12)$
- Create n clusters with KMean where n are all the suggestions from the elbow plots
- Use the PCA as a measure of how many clusters are relevant
- Use that many clusters for analysis

Challenges and learnings

Challenges and learnings

- Everything...is...so...slow...

Challenges and learnings

- Everything...is...so...slow...
- It is easier to identify clusters if the data naturally can be divided into groups

The End
